Section I. Summary	3
Section II. Comorbidities & Claims Analysis	18
Section IV. Considerations	36
Section V. Biometric Results	48

2023 KEY FINDINGS

- **The percentage of those participating decreased overall** from 69% in 2022 to 63% in 2023
- As seen in previous years, **Michigan had highest participation** among locations
- **85% of repeat participants** remained in ideal/low and/or made a positive risk migration, up from 77% in 2022
- Abnormal biometric values on an aggregate level were reported for **BMI and Blood Pressure**
- **7 participants quit smoking** between 2022 and 2023 screenings
- **15%** of all participants (29 individuals) **qualified for RAS** health coaching, 1 participated in program
- **36% of members have a chronic condition** & those members make up 76% of the total medical & Rx spend
- The top 5 chronic conditions are **hypertension, hyperlipidemia, obesity, diabetes & asthma**. All of these conditions had a lower prevalence than benchmark
- **Strive participants have a higher rate of wellness and/or office visits** compared to non-Strive participants
- Members with screenings have a higher per member cost than members without screenings; however, **members without screenings have a higher rate of having no claims**
- Members with a health score of 70+ cost **\$300 less** than members with a score below 70, when excluding high-cost claimants
- Members with a screening in both 2022 & 2023 experienced an increase in overall costs. **For the population with a health score improvement from 2022 to 2023, medical costs decreased while Rx costs increased**, including weight loss, diabetic, hypertension & cholesterol medications

Systolic Blood Pressure

Diastolic Blood Pressure

What is the difference?

Systolic blood pressure (the top number) measures the force of blood against artery walls when the heart contracts.

Diastolic blood pressure (the bottom number) measures the same force when the heart is at rest between beats.

Blood Glucose

Hemoglobin A1C

What is the difference?

Blood Glucose: (blood sugar) measures of the amount of sugar (glucose) in your bloodstream at a given moment. It can fluctuate throughout the day in response to food, exercise, and other factors.

Hemoglobin A1C: is a measure of your average glucose levels over the past 2-3 months. Provides long-term view of your blood sugar control and used to assess diabetes management.

Chronic Conditions & Health Screening Claims Analysis

Chronic Condition Prevalence

- **36.1% (196) of members on Brazeway's health plan have at least 1 chronic condition**
 - This is **below** the Kapnick book of business benchmark which is 42.0%
- **Of the members with a chronic condition, 52.1% (102) have only 1 while 47.9% (94) have more than 1**
 - This is **favorable** compared to benchmark which had 46% with only 1 and 54% with more than 1
- **The top 5 chronic conditions are hypertension, hyperlipidemia, obesity, diabetes & asthma**
 - The top 5 chronic conditions all have a **lower prevalence** as compared to benchmark
- **Compared to benchmark, Brazeway had a lower average age & higher member ratio**
 - The avg age was 32.0 compared to benchmark at 36.1
 - The member ratio was 2.5 compared to benchmark at 2.1; being above benchmark is driven by dependent children

Assumptions:

- All members enrolled in the health plan are included
- Data is from the most recent 12 months ending Dec 2023 on an incurred basis

Chronic Condition Cost

Year	Total Allowed Amount	Total Allowed with Chronic Conditions	Chronic Condition % of Total Cost	Chronic Condition % of Total Cost (Benchmark)
2021	\$4.0M	\$3.2M	79%	73%
2022	\$4.5M	\$3.6M	81%	73%
2023	\$3.7M	\$2.8M	76%	75%

While members with chronic conditions make up 36% of membership, they make up 76% of the total spend in 2023

Assumptions:

- All members enrolled in the health plan are included
- Data is from Jan 2021 through Dec 2023 on an incurred basis

Chronic Condition Cost

Year	PMPM Total Cost	PMPM <u>with</u> Chronic Condition	PMPM <u>without</u> Chronic Condition	PMPM <u>with</u> Chronic Condition (Benchmark)	PMPM <u>without</u> Chronic Condition (Benchmark)
2021	\$405	\$935	\$110	\$772	\$165
2022	\$491	\$1,049	\$120	\$751	\$168
2023	\$453	\$864	\$150	\$825	\$179

The PMPM cost of members with chronic conditions is 5.6-8.7x higher than members without chronic conditions

The PMPM cost of members with chronic conditions is 4.5-4.7x higher than members without chronic conditions

Assumptions:

- All members enrolled in the health plan are included
- Data is from Jan 2021 through Dec 2023 on an incurred basis

2022	82	45	6	133	17.2%
2023	82	39	7	128	18.0%

Assumptions:

- All members enrolled in the health plan are included
- Data is from Jan 2021 through Dec 2023 on an incurred basis
- True = hypertensive members

Hypertension: Gaps in Care

Year	Total Hypertensive Members (enrolled full 12 months)	Total Hypertensive Members with No Maintenance Rx (enrolled full 12 months)	Total Hypertensive Members with No Maintenance Rx Strive Participant (in 2023)	Of the 2023 Strive Participants High Blood Pressure Stage 2 (High- Risk)
2021	62	7 (11%)	5	-
2022	71	13 (18%)	5	-
2023	62	9 (15%)	3	1

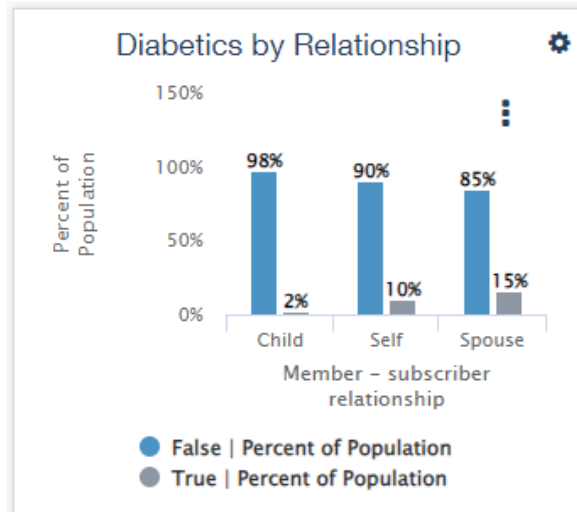

- In 2023:
 - 3 of the 9 members without maintenance drugs were strive participants with health scores of 71, 80 & 83
 - There was 1 member identified as high-risk
 - The member is a 45 y/o employee identified as having HBP Stage 2
 - The member was also hypertensive in 2021 & 2022 and did not have HBP Rx those years either; however, those years the member only had HBP Stage 1
 - The member's health score decreased from an 83 in 2022 to a 71 in 2023
 - The member reviewed the health report post-screening
- Success Story:
 - A 60 y/o employee was identified as being hypertensive since 2021 but with no medications
 - In 2022, the member was a Strive participant with a score of 71 and stage 2 HBP
 - In 2023, the member was a Strive participant with a score of 61 and stage 2 HBP; however, started using amLODIPine Besylate and Hydrochlorothiazide in March 2023. There's now been 10 claims for these drugs costing \$63 total OOP

Diabetes: Demographics

BIOMETRIC DESCRIPTIONS

CHOLESTEROL

A fat-like, waxy substance found in the blood. In excess, it can form tough, fatty plaques that clog arteries, which can increase the risk of heart disease.

BLOOD PRESSURE

Blood pressure is another main factor in determining overall heart health. Systolic pressure is the pressure in the arteries when the heart is contracting. Diastolic blood pressure is the pressure on the walls of the arteries when the heart is relaxing.

BLOOD GLUCOSE & HEMOGLOBIN A1C

Blood glucose is sugar that the blood stream carries to all the cells in the body to supply energy. High blood glucose for a prolonged period of time can cause damage to the kidneys, eyes, and other organs. Hemoglobin A1C measures average glucose levels over a 2-3 month period and is the best predictor and indicator of diabetes.

BODY COMPOSITION

BMI is an indicator of excess body weight. Generally, those with a higher BMI are also more likely to suffer from high cholesterol, increased blood pressure, and diabetes. BMI does have its limitations, but overall is a good indication of a serious risk.

TOBACCO USE

Nicotine use presents a serious risk to individuals. Those who abuse tobacco not only have increased rates of cancer and other diseases, but they are more likely to miss work. The CDC estimates that tobacco use costs \$156 billion in lost productivity each year and \$170 billion in healthcare expenditures (CDC, 2017).
